

Practical - 3

Practical Title: Responsive UI Design using CSS Grid, Flexbox, and Bootstrap/Tailwind

Problem definition: Design responsive layouts for Home, About, Registration, Dashboard, and Events pages using CSS Grid and Flexbox. Optional to use CSS framework such as Bootstrap or Tailwind. Ensure mobile-first responsiveness.

Theory

1. How does the layout adapt for mobile, tablet, and desktop screens?

Answer: The website follows a mobile-first approach. The layout automatically adjusts using CSS media queries, with a single-column layout on mobile, two-column layout on tablets, and multi-column layout on desktops.

2. Which layout technique is used and why?

Answer: CSS Flexbox is used for one-dimensional layouts such as navigation bars and alignment, while CSS Grid is used for two-dimensional layouts such as page sections and cards because it provides better control over rows and columns.

3. Are typography, spacing, colors, and contrast readable?

Answer: Yes. Appropriate font sizes, spacing, color combinations, and sufficient contrast are used to improve readability and user experience.

4. Is the framework used consistently without unnecessary inline CSS?

Answer: Yes. The design is implemented using external CSS files with minimal inline CSS to maintain clean and reusable code.

A. Implementation/ Output/Result (Keep only one option which is suitable to practical)

CSS Selector (Tag)	Application
body	Styles the entire webpage.
header	Styles the header section.
nav	Styles the navigation bar.
nav a	Styles links inside the navigation bar.
nav a:hover	Changes link style when the mouse hovers over it.
main	Styles the main content area.

CSS Selector (Tag)	Application
section	Styles each content section.
h2	Styles level-2 headings.
h3	Styles level-3 headings.
p	Styles paragraph text.
form	Styles the form.
label	Styles form labels.
input	Styles input fields.
select	Styles drop-down lists.
textarea	Styles multi-line text boxes.
button	Styles buttons.
button:hover	Changes button appearance on hover.
table	Styles tables.
th	Styles table header cells.
td	Styles table data cells.
img	Styles images.
footer	Styles the footer section.

A. GitHub Repository Link:

<https://github.com/diyatolia1212/StudentHub.git>

B. Challenges Faced:

In css coding , making style.css but learnt through chatgpt and w3schools .

C. Learning Outcomes:

Learned to create responsive web pages using CSS Grid by following a mobile-first approach, ensuring the website is visually appealing, accessible, and compatible across different screen sizes.
