

Practical - 2

Practical Title: Semantic HTML5 Pages with Accessibility-Ready Structure

Problem definition: Develop static HTML5 skeletons for at least 10 StudentHub pages such as Home, About, Register, Login, Dashboard, Events, Profile, Contact, Admin, FAQ, and Feedback. Use semantic tags and accessibility-friendly structure.

Theory

1. Are semantic tags such as header, nav, main, section, article, aside, and footer used properly?

Answer: Yes. Semantic tags are used appropriately to improve readability, and maintainability.

2. Are form labels, headings, image alt text, and navigation links accessible?

Answer: Yes. Form fields use labels, images include alt text, headings are properly organized, and navigation links are accessible.

3. Is the page structure consistent across all pages?

Answer: Yes. A consistent layout, header, navigation menu, and footer are maintained throughout the website.

A. Implementation/ Output/Result (Keep only one option which is suitable to practical)

HTML Tag	Application (Use)
<!DOCTYPE html>	Declares the document as an HTML5 document.
<html>	Root element that contains the entire HTML page.
<head>	Stores metadata, title, links to CSS, etc.
<title>	Sets the title displayed on the browser tab.
<meta>	Provides metadata such as character encoding and viewport settings.
<link>	Links an external CSS stylesheet to the HTML page.
<body>	Contains all the visible content of the webpage.
<header>	Represents the top section of the webpage containing logo or title.

HTML Tag	Application (Use)
<nav>	Contains navigation links for moving between pages.
<main>	Holds the main content of the webpage.
<section>	Groups related content into sections.
<article>	Represents independent content like an event or blog post.
<aside>	Displays additional or sidebar content.
<footer>	Represents the bottom section with copyright or contact details.
<h1> to <h6>	Defines headings of different levels.
<p>	Displays paragraphs of text.
<a>	Creates hyperlinks to other pages or websites.
	Displays images on the webpage.
<form>	Creates a form to collect user input.
<label>	Provides a label for form fields, improving accessibility.
<input>	Accepts user input such as text, email, or password.
<textarea>	Allows users to enter multiple lines of text.
<select>	Creates a drop-down list.
<option>	Defines items inside a drop-down list.
<button>	Creates a clickable button for submitting or resetting forms.
	Creates an unordered (bulleted) list.
	Creates an ordered (numbered) list.
	Defines a list item inside or .
<div>	Generic container used to group elements for styling.
	Inline container used to style or group small portions of text.//not
 	Inserts a line break.
<hr>	Creates a horizontal line to separate content.
	Displays important text in bold.
	Displays emphasized (italic) text.

About StudentHub

StudentHub is an online portal developed for students to manage academic activities such as attendance, assignments, events, results, notices, and profile information.

Mission

To provide students with a simple and user-friendly academic portal.

Vision

To make campus services accessible digitally through one platform.

C. GitHub Repository Link:

<https://github.com/diyatolia1212/StudentHub.git>

D. Challenges Faced:

In Html coding but learnt through chatgpt and w3schools .

E. Learning Outcomes:

Learned to develop a multi-page StudentHub website using HTML5 semantic elements, create accessible and well-structured web pages, maintain consistency across pages, and build a strong foundation for future CSS and JavaScript integration.

Faculty Remarks: (Keep this blank for faculty)
