WHAT IS ONLINE FOOD ORDERING?

A website or app connects customers with restaurants, payment services and delivery partners.

The goal: order easily, pay safely and track delivery.

THE PROBLEM

How can a website handle orders, payments and live updates accurately without losing data?

THE SOLUTION

- ✓ Easy menu and shopping cart
- ✓ Server validates every order
- ✓ Secure payment processing
- ✓ Database stores order status
- ✓ Updates keep users informed

THE ORDER JOURNEY — STEP BY STEP

1 BROWSE Choose a restaurant and view the menu.

2 ADD TO CART Select dishes, quantity and delivery address.

3 PLACE ORDER Browser sends a secure request to the server.

4 VALIDATE Server checks items, price and address.

5 PAY & SAVE Payment is verified; order is stored.

6 DELIVERY Restaurant prepares; status updates appear.

Behind every tap: request → processing → data storage → response.

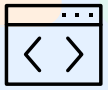

WHERE DOES A FRAMEWORK HELP?

- ✓ Reusable components keep pages consistent.
- ✓ Routing connects pages and API endpoints.
- ✓ State management keeps the cart updated.

HOW THE WEBSITE WORKS

FRONT END	BACK END	DATABASE	SERVICES
Menu • Cart	Checks order	Saves data	Payment

REQUEST → PROCESS → STORE / RETRIEVE → RESPONSE

Example stack React (front end) + Express / Django (back end) + MySQL / PostgreSQL (database)

ORDER LOGIC & GOOD DESIGN

Submit — **Validate** — **Save order** — **Confirm**

- ✓ Mobile-friendly and accessible layout
- ✓ HTTPS + input validation for safer orders
- ✓ Clear loading, error and success messages

A TINY CODE EXAMPLE

```
fetch("/api/orders", { method: "POST",
body: JSON.stringify(cart) })
```

This sends cart data to the server. The server must validate the request before creating an order.

REAL-WORLD CONNECTION

Food delivery platforms connect four parts:

- Customer places an order
- Restaurant prepares the food
- Payment service confirms payment
- Delivery partner brings the order

THE BIG IDEA

Online ordering is not just a button click.

It is a coordinated flow between the interface, server, database and external services — working together to get your meal to the right place.
